---

My name is LT. Jamey Brads, I work for Roanoke Fire/EMS in Roanoke VA. We purchased some helmet bands from you in the fall of 2007. My Chief asked me to send you an evaluation of the product. Here is what we found:

The band is very visible at night inside and outside. The band is also visible in lite to moderate smoke conditions inside the burn building. We put them on some new rookies during burn building operations making them easier to identify. We also think they would come in handy during outdoor search operations at night. This product has allot of different potential applications that we will continue to try them out in. One thing from the field test was that they were a little difficult to activate with a gloved hand. Thank you again for the chance to try this product, and please feel free to contact me with any questions.
